

The SAS program at King offers an opportunity for qualified students to work cooperatively with other children that have similar work ethics. SAS teachers provide project based-learning environments that encourage a collaborative spirit as well as foster independence, and responsibility. Within the SAS classroom, technology is interwoven throughout the curriculum. A continual long-term goal for all SAS students is the Digital Portfolio. It showcases each child's individual experiences with the use of technology. We are committed to academic excellence and preparing our students to compete in the educational arena.
